

5NINES DATA

DataSafe

A scalable data protection and business continuity service for businesses of all sizes

Data and information from your daily operations should be considered your business' most valuable asset. What are you doing to protect it?

With technological advances in the transfer and storage of massive amounts of information today, businesses in our computer-based economy are turning to expert Data Storage Providers (DSPs) to ensure the longevity of their operations. 5Nines, in partnership with Unitrends has developed - proven, reliable, and secure options for every business need.

5Nines' data protection and recovery services offer you a competitive advantage. Our applications and equipment are compatible with all major computer platforms. And we offer scalable solutions - which means as your business and data demands grow, so do we.

Technology at the forefront:

It is now possible to have a managed solution for back up hardware, software, vaulting, and bandwidth all from one supplier.

- ⚙️ **Simplify** the data backup processes, using reliable and robust disk to disk technology, creating multiple levels of data redundancy, and reducing potential for human error and dependency on unreliable magnetic tape.
- ⚙️ **Rapid** (random access) data and server recovery, whether it's recovery of just a single email or file, or rapidly recovering a complete business system including the hardware.
- ⚙️ **Automatically update** and maintain a current copy of your entire data structure and system images, electronically at a remote site, for rapid disaster recovery.
- ⚙️ **Incorporate electronic vaulting** capabilities, promoting enterprise-class disaster recovery, thus reducing your reliance on unreliable and antiquated tape back-ups to securely store valuable information both on and off site.

Price Model that's hard to beat

- ⚙️ **Disk-to-disk (D2D) backup** has become the preferred method due to its speed and reliability. When the total cost of operating a D2D system is compared to the hidden costs of a standard tape-based backup system, the return on investment is typically less than twelve months.

Monthly Costs: disk to disk back-ups begin at \$390 per month.

DataSafe Highlights

- ⚙️ High-speed, disk-based data protection
- ⚙️ High performance data compression
- Support across more than 25 operating systems
- ⚙️ Point-in-time recovery
- ⚙️ Retrieve just one file through easy to navigate folder structures
- ⚙️ Electronic data vaulting for offsite protection at 5Nines Data Center
- ⚙️ OS, application and file state imaging
- Application-specific recovery support
- ⚙️ Bare-Medal Recovery
- ⚙️ Integrated solution from one vendor

Absolute Benefits

- ⚙️ **Offer multi-platform compatibility**, allowing end-users to operate Unitrends' products across virtually all of today's most popular business operating systems, including Windows, Linux, Solaris, UNIX and more than 20 others.
- ⚙️ **Finally One Provider:** It is now possible to have a managed solution for back up including hardware, software, vaulting, and bandwidth all from one supplier.
- ⚙️ **Avoids the risk** of human dependency required of tape systems
- ⚙️ **Saves costs & lost opportunity**, by allowing you to get "back to business" in a predictable and acceptable time frame.

5Nines Data Center Services

- Disaster recovery
- Managed services
- Network management and monitoring
- Colocation
- Data center storage
- Virtual Private Networks
- High-speed Internet via fiber and wireless
- VOIP
- Web hosting
- Domain name registration
