VOIP - Reliability and Scalability without the sacrifice

As business communications evolve rapidly to IP-converged technologies, your company needs to adapt to compete and service customers effectively.

Imagine having virtually instant access to every e-mail, voice and fax message that you receive almost anywhere you are. Now imagine being able to manage and respond to those messages using simple voice commands over the telephone or by using a mouse. Imagine being able to do that from wherever you are.

5Nines employs several phone system solutions to its technology offering. These systems allow you to take advantage of IP telephony such as ACD and call center applications, integrated voicemail and wireless capabilities. When you're ready to add advanced applications such as unified messaging and pure VOIP, easy migration of hardware, software and telephones protects your investment.

Unified Messaging: Receive and make telephone calls, faxes as well as schedule conference calls from Microsoft Outlook.

Technology at the forefront: VOIP highlights

- ❑ **Internet Telephony:** works over private networks or the internet via secure encrypted packet transmission or Virtual Private Networks (VPN)
- ❑ **Full PBX Functionality** plus all the advanced voice/data conversion features of Voice Over Internet Protocol (VOIP) systems
- ❑ **Complete Office Solutions:** Business phone sets provide full featured office functionality, Polycom units for conference rooms, analog adapters for home office phones or remote locations.
- ❑ **Microsoft Outlook:** Integration with Microsoft Outlook and Exchange- voicemail messages to email, Outlook contact pop-up when caller-id recognized, Dial calls from outlook contact
- ❑ **Direct In-Bound Dial (DID) numbers:** 4-digit inter office extensions – employee gets his/her own number.
- ❑ **One Number** - Allows for one work number – separate cell phone number no longer needs to be listed on correspondence.
- ❑ **Connect Phone Sets** at home offices, remote offices, or any temporary locations to act exactly like an office extension

Price Model that's hard to beat

- ❑ **Monthly Costs:** \$35 per average number of lines utilized (not per phone set),
- ❑ **Unlimited local calling**
- ❑ **Long Distance:** \$0.07 per minute
- ❑ **Audio Conferencing:** included

Business Benefits

- ❑ **Direct Integration** with MS Outlook
- ❑ **System & Mailbox Admin** Easy and low cost administration for system settings and phone adds or changes using Internet Explorer
- ❑ **Enable Mobile Employees** to keep in touch seamlessly from any location
- ❑ **Integrated billing** for remote locations- no more separate accounts and bills for different sites or expense reports for home offices
- ❑ **Keep your existing local** and 800 numbers

Phone Features

- ❑ **Full Services:** Caller ID, Auto-attendant & voice mail
- ❑ **Find-me follow-me feature-** set you office phone, cell-phone and home phone to ring at that same time with ability to transfer back to office extensions.
- ❑ **Softphone Functionality-** use your computer as your phone set for mobile solution or eliminating phone-set costs
