

5NINES DATA

SmartSpace

Business Grade Internet Service for Multi-tenant commercial and residential buildings

Through its unique location in Network 222, 5Nines Data can offer customers direct connectivity to local, regional, and national Carriers.

Through our data center facility we can provide direct access to: Spiralight, Charter, AT&T, Norlight, US Signal, TDS Telecom, TDS Metrocom, Global Crossing, CenturyTel, UW/WiscNet, and others.

5Nines is a well established IT solutions and services organization with experienced personnel in data center operations, networking, internet delivery, hosting applications, and Oracle and SQL database development and administration

5Nines Advantages

-  Multiple Internet Providers
-  24/7 Customer Support
-  Multiple last mile options, including wireless
-  Customized Quality of Services
-  Comprehensive Data Center Services
-  24/7 Monitoring

Technology at the forefront:

Higher performance and managed QoS (Quality of Service) are features that set the 5Nines Data Internet Service apart from other available alternatives. We deliver our business level Internet service to your multi-tenant building, and also offer professional network installation, management and ongoing support services to give your tenants a level of service that is unique in the Internet Service market.

 **Starting from its private Data Center** in downtown Madison, 5Nines Data provides commercial Internet Access services for businesses that are differentiated from inception and design. The 5Nines network has multiple internet feeds from major Telecom Carriers at capacity in excess of 300 megabits. We also supplement this access with what datacom professionals refer to as 'peering' with other important Madison and regional networks and providers. 5Nines currently peers (directly interconnects) with many major local networks; Charter, TDS, ATT, and the UW Madison campus network.

 **Being a major ISP** (Internet Service Provider) in Madison, we also have an AS (Autonomous System) number, which allows 5Nines to have multiple public "netblocks," providing up to several thousand IP addresses per block. This means we can provide each of your tenants their own unique IP address, ensuring that modern Internet applications work without interference caused by a provider "Firewalling" or "NATing" a users connection.

 **When we install** Internet Services in your building, we deliver and configure a network switching environment that allows for managing each tenant individually. Security, performance, QoS, and other features can be configured per tenant unit, enhancing the user experience. As a standard feature, base line QoS can be established to reliably support any compliant VoIP, Video Conferencing, or other real time application. Individual tenant units are guaranteed a minimum QoS level regardless of their neighbor's usage habits.

 **Internet applications** will continue to get richer and demand more from the Internet access and transport architecture. 5Nines Data Internet Service is positioned to help you deliver a more upscale and reliable real estate product to your customers.
