# Virtual Private Servers

## The benefits of a dedicated server without the high pricetag

Virtual private servers bridge the gap between shared web hosting services and dedicated hosting services, giving independence from other customers of the VPS service in software terms but at less cost than a physical dedicated server.

As a VPS runs its own copy of its operating system, customers have superuser-level access to the machine, and can install almost any software that runs on the OS.

## The 5Nines Advantage

- Security:** Includes 24/7 building security, key-only access through main door and biometric entry to the data center, employee escorts, and motion-detection video cameras.
- Bandwidth:** 5Nines is multi-homed on the internet with connections through Charter, JVLNet, US. Signal and Norlight who's Madison POP is located on site.
- Extreme Networking:** 5Nines also has network and tele-communication service opportunities with LightPoint, Charter, SBC, KMC, U.S. Signal, Global Crossing, ChoiceOne and TDS.
- Monitoring.** Network, internet and environmental monitoring is conducted 24/7 both internally and externally by 3rd party providers to ensure fail-proof operations.

## VPS highlights

A virtual private server is a isolated slice of a stand-alone server. Each VPS performs and executes exactly like a stand-alone server for its users and applications as it can be rebooted independently and has its own root access, users, IP addresses, memory, processes, files

- Root access:** gives you the ability to install and configure any programs you want. Want to run PHP with PostgreSQL instead of MySQL? Go ahead: install it.
- Flexibility:** You can use the server for backup, file storage, or anything you need. You can also host other services, such as a mail server, an FTP server, or any type of server you want.
- Back-ups:** True system snapshots giving the ability to instantly restore the system to it's original state at different time intervals
- Keep Pace:** Never outgrow your hardware. As your performance demands increase we can relocate your Virtual Server to a faster physical machine or another machine with more available CPU, Disk I/O, Network I/O, etc.
- Cost Effective:** Pay for the network bandwidth and CPU you need not the physical space in a datacenter, power use, or server hardware.

### Virtual Private Servers

- Choice of Operating Systems
- Choice of database: SQL Server 2000, MySQL
- Unique IP addresses available
- Daily Back-ups, Firewall service, Gold Plan.
- Urchin 5.0 web analytics or AWstats
- Daily Back-ups
- Firewall service
- 24-Hour Technical Support
- Guaranteed Uptime
- 24 h Technical Support (E-mail)
- Telephone Support (8am-5pm)

## About 5Nines Data

Founded in 2003, 5Nines Data provides commercial data center, wide area networking and Internet services as well as on-site IT integration and support services to businesses in southern Wisconsin.

Since then this privately-held and financed company has continued to add services such as co-location; internet access (including wireless); hosting; data storage; telephony; network support and managed services.

## SPEED, STABILITY AND SECURITY
